

ENERGY LABEL 2025

SCHOLTenergy

This energy label provides an overview of the origin of the electricity supplied by Scholt Energy in Belgium in 2025, the energy sources used, and the associated environmental impact. This overview shows how our total supply is divided between conventional and renewable energy sources for each product.

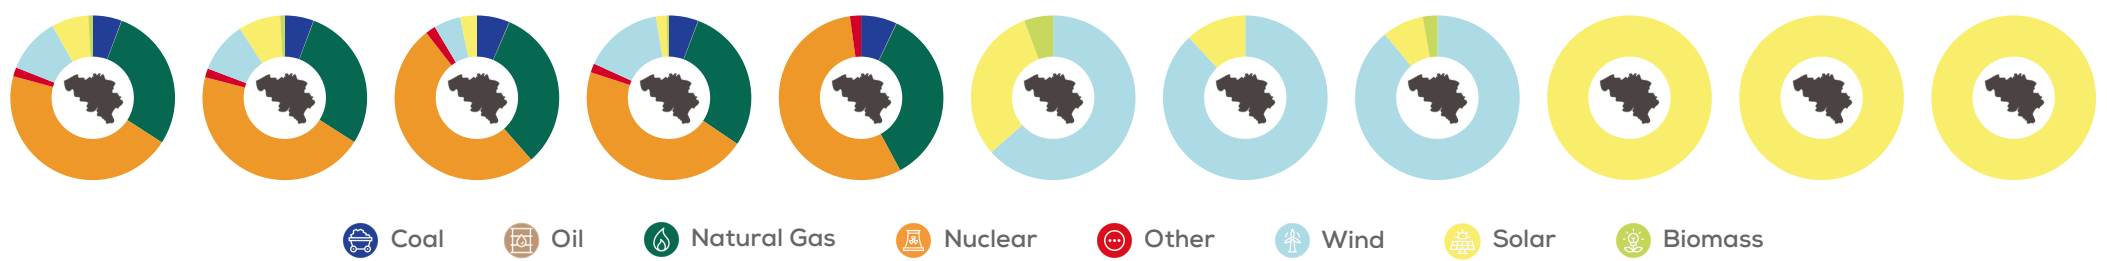

- If you purchase GuaranteeGreen or GuaranteeSolar, please refer to the corresponding column to view the origin of your electricity.
- If you do not purchase green electricity, the 'Standard' column applies to you.

Conventional energy sources include natural gas and nuclear energy.

Scholt Energy makes its customers' electricity consumption more sustainable with Guarantees of Origin from wind, solar and biomass energy. This electricity label also shows the environmental impacts of the various forms of electricity generation. These are expressed in terms of CO₂ emissions and the amount of radioactive waste released during electricity production.

Please note: this electricity label is based solely on the electricity that Scholt Energy has actually supplied to customers. Green electricity from producers that has not been supplied directly to customers is therefore not included in this overview.
